GearCube Ultimate

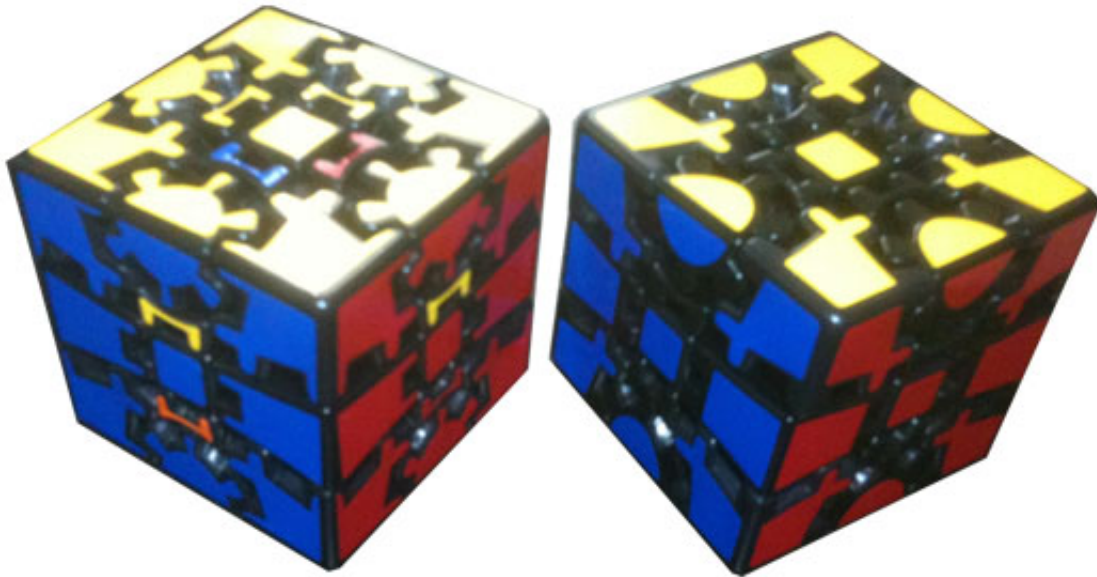

GearCube Extreme

### Showing what should be logic defying impossible moves.

Below is what Kenneth Brandon had to say when he played with the Gear cube Extreme for the first time. **What a wonderful challenge!** The **Gear Anisotropic Cube** is an awesome puzzle! I am very much enjoying it. I've had about 6 hours with them and so far I am able to solve the one with the original stickers. The one that has four stickers per edge (based on the Tony Fisher's label design) is harder and requires an extra step. I have not found an algorithm to orient the edges on this one. (I'm sure I'll find one soon.) While I can solve the Gear Cube in under 20 seconds, the **Gear Anisotropic Cube** is taking me about 7 minutes per solve!

**As our thank you for participating in our little survey** we will provide you with one Free set of DIY special labels based on the Tony Fisher design for Each Gear-Cube Extreme ordered that transforms your Gear-Cube Extreme to the Ultimate Gear-Cube thereby adding an extra challenge dimension.

GearCube Ultimate

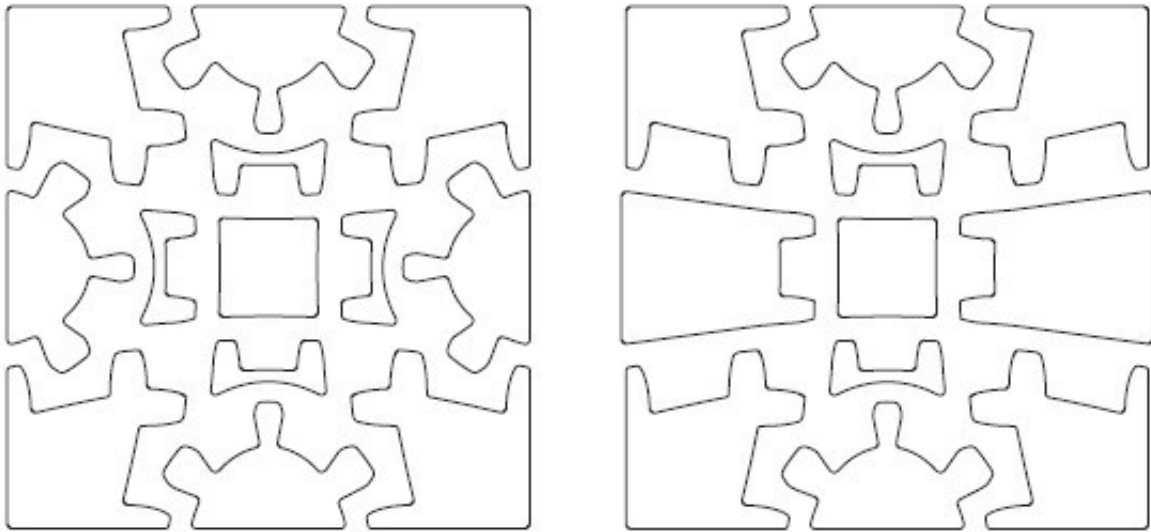

GearCube Extreme

Using our standard high quality German Vinyl in matt finish sticker material.

Two sides are in Green & Blue

Four sides are in Yellow, Red,

Orange and Purple.

Because of the quarter turns, any gear can switch positions with any other gear.

This makes the Gear-Cube an even greater challenge than any previous puzzle.

This will give your brain a real work out, let us know your best solving times.
