

# Skewb Diamond

*Purchased from Meffert's 2007.*

(plastic, 2.5 inches between faces, 4 inches point to point,  
opposite faces are light blue / blue, yellow / white, green / light green, red / orange)

Rotation is not about the points of the diamond; rather it is along each of the four planes that cuts the puzzle in half. This puzzle is a variation of the *Skewb* (it is a smaller version of the *Super Skewb Diamond*). *Jaap's Page* presents a solution that is a bit more efficient than applying his solution for the *Skewb*.
